Skills

HTML | CSS | JavaScript | TypeScript| Django | Node.js | React | Next.js | Python | C++ |
SQL | MongoDB | API Integration | CI/CD Pipelines | Tailwind CSS | AWS | Photoshop | Git |
Firebase | REST APIs | UI/UX | Responsive Design | Problem-Solving

Experience

October 2023 - Present

Chord Engine (Remotely) – *Full Stack Developer*

- Successfully built and deployed a website using django and react.js ready to handle authentication and mongodb integration for millions of users
- Successfully integrated django with mongodb which is not supported out of the box. This allowed transferring JSON from and to django, this in turn allowed me to use Javascript in the frontend
- Class based API views to perform CRUD operations in the mongoDB.
- Custom algorithms to handle audio compression and upload from django to react.js
- Ci/CD pipeline integration using Git with AWS making continuous deployment possible
- AWS Route 53 for domain management, and S3 buckets for audio storage

September 2023 - January 2024

Delta Communication Network (Khi, Pk) – *Full Stack Developer*

- Successfully built and deployed a website using next.js, the purpose was to enlighten users with the brand's identity.
- Collected information about the market related to the company. This helped me create an amazing UI/UX responsive experience for the user.
- Restful APIs to perform CRUD operation with the database. Integrating the API views within a custom dashboard to allow easy manipulation of data.
- Custom services component using array mapping, where users can become familiar with what the company provides.
- Ci/CD pipeline integrated using Git with Vercel making continuous deployment possible.

August 2023 - December 2023

[Westgate Capital](#) (Remotely) – *Full Stack Developer*

- Solo spearheaded the designing, development and deployment of a website for a real estate company.
- Created a beautiful UI/UX animated experience for the user. Utilized custom css and javascript to perform scroll, intersection and view based animation for the elements on the website.
- Created custom algorithms to handle image loading, since the company relied much on display of properties. So it was necessary to display high quality images but not at the expense of the user's time. Successfully implemented the algo.

Projects

January 2024 - Present

[WizardryBrews](#) (Khi, Pk) – *Developer*

Custom web app for my coffee startup. Used design techniques like color matching, shadow mixing to create a really attractive looking web experience for the users. Working on creating a custom ordering system for the users where notifications are sent to my email when users send in orders.

January 2024 - Present

B.M CodeCraft (Khi, Pk) – *Developer*

Created an amazing looking portfolio as a showcase of my HTML, CSS and JavaScript skills, with a blog writing algorithm mixed in with the backend.
